Team ID	Individual Project (No Team ID)
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

EMPATHY MAP CANVAS — PROJECT PERSONAS

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report

Purpose: Identify the information needs, challenges, and expected benefits of the intended users of the three Tableau dashboards.

Note: The following are project-defined analytical personas used to guide dashboard design. They are not claims of interviews or field research with real individuals.

Persona 1 — Energy Policy Consultant

Scenario 1: Fuel Taxation & Subsidy Policy

THINKS & FEELS	Needs to understand differences in fuel taxation and prices across countries. Wants evidence to compare policy approaches, while recognizing that price differences can have multiple causes.
SEES	Country-level tax percentages, regional petrol-price differences, subsidy categories, and variation among countries.
SAYS & DOES	Compares tax levels and regional prices; examines the relationship between taxation and petrol prices; explores prices by subsidy level.
PAINS	Large tables are difficult to compare; differences between countries can be hard to interpret; correlation does not by itself explain causation.
GAINS	Clear country and regional comparisons, visible subsidy patterns, and interactive views that support policy exploration.

Persona 2 — Global Supply Chain Manager

Scenario 2: Global Fuel Prices & Supply Chain Planning

THINKS & FEELS	Wants to understand where fuel costs may be relatively high or low and how prices change over time to inform planning.
SEES	Petrol and diesel prices across countries and regions, top and bottom petrol-price country groups, and historical Brent crude and fuel-price trends.
SAYS & DOES	Compares petrol and diesel prices for countries ranked by average petrol price; reviews regional differences and historical trends.
PAINS	Fuel-price variation complicates cost comparisons; many countries and time periods make patterns difficult to identify quickly.
GAINS	Ranked comparisons, regional summaries, and historical trends that can inform further procurement and logistics analysis.

Persona 3 — Energy Economics Researcher

Scenario 3: Fuel Prices, Taxation & Economic Development

THINKS & FEELS	Wants to explore how fuel prices and taxation differ across income groups and how subsidies may relate to price patterns.
SEES	Taxation-versus-petrol-price relationships, fuel prices by subsidy level, average petrol price by income level, and average tax percentage by income level.
SAYS & DOES	Filters analysis by income level, compares economic groups, and looks for relationships among taxation, subsidies, and prices.
PAINS	Relationships may be complex; group averages can hide country-level variation; visual patterns require careful interpretation.
GAINS	Comparable group-level views, filters for focused exploration, and a clearer starting point for economic analysis.

Design implication: The dashboards should prioritize readable comparisons, consistent units, clear labels, and filters that help users narrow the analysis. Findings should be presented as descriptive patterns, not proof of causation.

Ideation Phase
Define the Problem Statements

Date	31 October 2026
Team ID	Individual Project (No Team ID)
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Reference: https://miro.com/templates/customer-problem-statement/

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel

PS-1	I am an energy policy consultant reviewing fuel taxation and subsidy patterns across countries.	Compare fuel tax percentages and petrol prices across countries and regions.	The dataset contains many countries, regions, subsidy categories, and time periods, making comparisons difficult to scan in raw tabular form.	I need to examine multiple measures together, and the relationship between tax and price does not by itself prove that one causes the other.	Uncertain about which patterns are meaningful and wanting a clear, interactive way to explore the evidence.
PS-2	I am a global supply chain manager assessing fuel-price conditions for planning.	Identify countries with relatively high or low petrol prices, compare petrol with diesel prices, and review historical fuel-price trends alongside Brent crude.	Prices vary across countries and regions, and the volume of information makes quick comparison difficult.	I need ranked comparisons and time-based views to identify patterns that may inform further procurement and logistics analysis.	It is difficult to quickly identify useful comparisons without a consolidated visual overview.
PS-3	I am an energy economics researcher exploring fuel prices and taxation across income groups.	Compare average petrol prices and tax percentages by income level, and explore how prices vary across subsidy levels.	Country-level price and taxation patterns differ, while group averages can conceal variation within each income category.	I need comparable group-level views and an income-level filter to explore patterns without treating association as proof of causation.	I need a clearer starting point for economic analysis and careful interpretation of differences between income groups.

Project-specific note: These are project-defined analytical personas aligned with the three Tableau dashboard scenarios. They are not actual interviewees, and the statements are not presented as interview findings.

Ideation Phase
Brainstorm & Idea Prioritization Template

Date	31 October 2026
Team ID	Individual Project (No Team ID)
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Harshvardhan Gupta	Compare fuel tax percentages with average petrol prices across countries.	Taxation & policy	1
2	Harshvardhan Gupta	Compare average petrol prices across regions and identify relatively high- and low-price countries.	Regional comparison & supply chain	2
3	Harshvardhan Gupta	Explore fuel-price patterns across subsidy levels and income groups.	Subsidy & economic development	3
4	Harshvardhan Gupta	Examine historical petrol/diesel prices alongside Brent crude prices over time.	Time-series & supply chain	4

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Lo w)	Importance (High/Medium/Lo w)	Priority	Selected (Yes/No)

1	Fuel taxation and subsidy policy dashboard	High	High	1	Yes
2	Global fuel prices and supply-chain comparison dashboard	High	High	2	Yes
3	Fuel prices, taxation and economic development dashboard	High	High	3	Yes
4	Historical fuel-price and Brent crude trend worksheet	High	Medium	4	Yes

Project-specific note: This is an individual project. The ideas listed are documented project-planning options, not outputs of a team brainstorming session. Feasibility and importance ratings are the student's planning judgments, not measured results. The first three selected ideas correspond to the three Tableau dashboards; the historical trend view is retained as a supporting worksheet.
